EXPERIENCED

WPB is the oldest mitigation company in the state of Pennsylvania. Since 1984 we have installed over 5000 mitigation systems. In 1989 WPB reduced the radon levels in a New Jersey home from over 3000 pCi/l to 2.2 pCi/l. In 2004 we mitigated a new home in Easton from 1400 pCi/L to 2.5 pCi/L.

KNOWLEDGEABLE

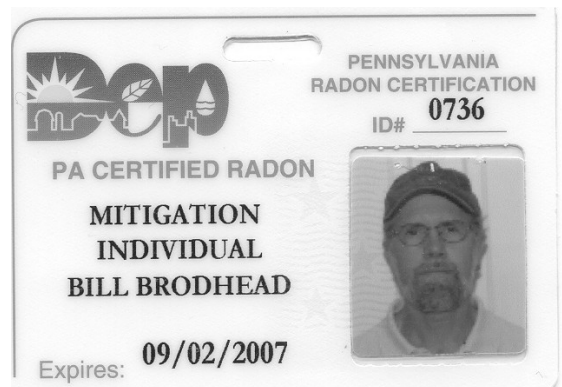

Bill Brodhead, the owner of WPB, develops and presents radon workshops for the EPA sponsored Rutgers Regional Radon Training Center. Bill has published over a dozen research papers for the Annual Radon Symposium. You can directly download one of his papers from the WPB web site at www.wpb-radon.com. Bill has mitigated radon in

Navy and Air Force housing at US bases in Guam, Korea and Okinawa.

CERTIFIED

WPB is radon mitigation certified by PA DEP, #584. Be sure to ask to see the PA DEP Certified Radon Mitigation badge from anyone doing a radon estimate or installing your radon system. It is a state law that a certified individual must visit your house and design the radon system before it is installed. WPB does not sub-contract the radon installation. All WPB jobs are installed by Bill or Mark Dilts who is also PA DEP certified #2159 and has been

installing mitigation systems for WPB for over seven years. WPB is fully insured. See customer comments at www.wpb.radon.com. We are a Better Business Bureau member.
